

GROUP 15

RASHID HASSAN JOSEPH WAWA

1. Problem Statement

Retail businesses face challenges such as:

- Manual sales recording and errors
- High cost of traditional POS hardware
- Lack of real-time sales reports
- Limited scalability for multi-branch operations

General Objective

To design and implement a SaaS-based POS system for retail businesses.(web app)

Specific Objectives

- To automate sales and billing processes
- To support multiple payment methods(cash /mobile)
- To manage inventory in real time
- To generate sales and financial reports
- To support multi-branch retail operations

2. Problem Statement

Many pharmacies face the following challenges:

- Poor tracking of medicine stock levels and expiry dates
- Manual prescription and sales records leading to errors
- Difficulty complying with regulatory requirements
- Lack of real-time reports for decision-making
- High cost of purchasing and maintaining on-premise systems

These challenges result in financial losses, medicine wastage, and potential legal risks. There is a need for a **centralized, cloud-based pharmacy management solution** that is affordable, secure, and compliant.(web app)

General Objective

To design and implement a SaaS-based Pharmacy Management System that enhances inventory control, regulatory compliance, and operational efficiency.

1.3.2 Specific Objectives

- To develop a cloud-based system for managing pharmacy inventory and sales

- To implement batch and expiry tracking for medicines
- To provide prescription and controlled drug management features
- To generate real-time reports for pharmacy decision-making
- To design a secure multi-tenant architecture for multiple pharmacies

3. Problem Statement

Small and medium businesses face several challenges when adopting e-commerce:

- High cost of developing and maintaining independent online stores
- Lack of centralized vendor and order management
- Poor sales analytics and reporting
- Limited scalability during high traffic periods
- Security concerns in online transactions

These challenges hinder business growth and digital adoption, creating a need for a centralized SaaS-based marketplace solution.

General Objective

To design and implement a SaaS-based multi-vendor e-commerce platform that supports multiple sellers and customers through a single cloud-based system.(web app)

Specific Objectives

- To develop a vendor onboarding and management system
- To implement product listing and inventory management
- To design secure online ordering and payment processing
- To provide commission and revenue management
- To generate sales and performance reports
